

ORBE – Offset Resources Base Economy

worksheet/algorithm&formatonic//
Consideration for white paper///thehobi.o.c.p.//22

TOKEN/UTILITY TOKEN

Acquisition = total buy cost \$1.12cts – first issue 8.000.000.000 // mining component// operating protocol = PoS proof of stake = 'index' 100 billion tons whole available resources (1st reference)// consensus mechanism = PoW proof of work = consumption habits Individual participation (2nd reference)//

STATUS/

PRIVATE – PERMISSIONED// mining-issuance = single batch mining = 8 billion// development B.a.a.S.// the HOB IOCP servers will be use for initial & storage// BLOCKCHAIN = compatible/hybrid//

DISTRIBUTION/

W3C, ORBE web page, trading platform, promoters, community lings// only one fee = only one transaction// NOMINATIVE – EXCLUSIF// not resalable// BANKING & PAYMENT – ALL INITIAL PAYMENT WILL BE STORED IN PYSICAL AND DIGITAL CURRENCY.

ORBE COIN ISSUANCE//

SEE REVIEW OF SCHEDULE//

DEPLOYMENT// SEE REVIEW OF SCHEDULE//

Reference 1 = development of ORBE Blockchain (hybrid) + NATIVE coin (total resources available storage) //

Reference 2 = Alteration of the commodities platform (standard: *(1) Licensing and contracts, (2) Company register and economic beneficiaries (3) Commodity trading and supply chains*);

TREACABILITY// 2 way leger// ORBE Coin provide for any Human made agreement on services, voluntary acts, trade record, loU or I owe You, etc//
FOR SUPPLY CHAIN - Due to international trade processes, the individual production steps are distributed worldwide. As a result, supply chains are often difficult to trace and in many cases there is no precise knowledge about the origin of a product. A typical application of Blockchain technology is therefore the creation of a traceable supply chain, as the respective production and processing steps can be made visible in the form of transactions of the respective goods. Blockchains allow the individual parties to be identified, so they are forced to take greater responsibility for their misconduct.

BLOCKCHAIN RESOURCES

Blockchain technology data storage FOR ALL RAW MATERIAL Transactions are processed, verified and stored in a growing list through a distributed network of computers. This ensures a high level of data security and transparency. Each human made transactions (Labor for extraction of resources) and any type of information, such as financial transactions, contracts, shares or land register entries can be acknowledge//

TOKEN ACCESSIBILITY & AVAILABILITY AND INTANGIBLE VALUE//

ORBE Token position is fundamental for a continuous Humane society. ORBE provide with a value of what Each Human of Earth are entitled on the basis of available resources Vs accessible products, ORBE provide with the real time value of the Globalized Economy distribution.

SIMULATION//

FUNCTION 1//

POPULATION ACKNOWLEDGEMENT

FUNCTION 2//

POPULATION ACCOUNTABILITY

FUNCTION 3//

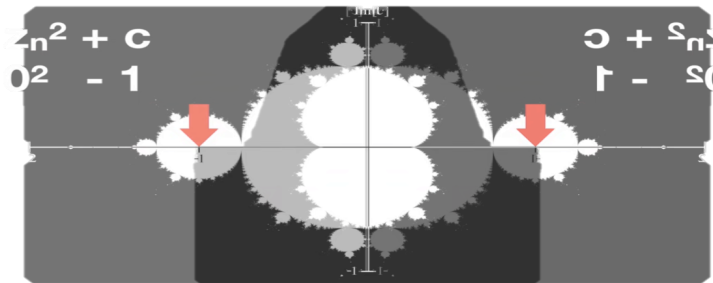

RESPONSIBILITY DISTRIBUTION (by Participation function = LIFE FOOT PRINT - <https://www.footprintcalculator.org/home/en> //the less you pollute, the less you consume voided goods, the less you influx on Earth Biome, Etc ...)

TOKENOMICS//

The Value computed from the number of Human Birth/Death/Day/extracted resources = Resources at Birth (by year of birth) – Resources at death (by year of death) – Token/PoW (what did you promote (lifestyle, consumptions, environment disturbance)) average of Resources Available for each Human – ORBE COIN/PoS (what you individually own or have participated in extracting and/or transforming in to usable goods (including financial assets, contracts, dead assets, SPV, etc)) : I.V.E. DATA/Global C.I. or Consumption Index **ie; link all data value to ORBE??** (see worldcount: <https://www.theworldcounts.com/challenges/consumption>) || 1 ORBE Token UPDATE = 1 CYCLE OF COMPUTATION USE 4.669 AND IT EQUAL 23:59:59 HOURS/repeat/

PROJECTED SIMULATION

1 IS "NEEDLE POINT/ WHAT SHOULD BE
0 IS NEUTRAL POINT/ WHAT IS NOT
-1 IS POSITIVE POINT/ WHAT IT IS

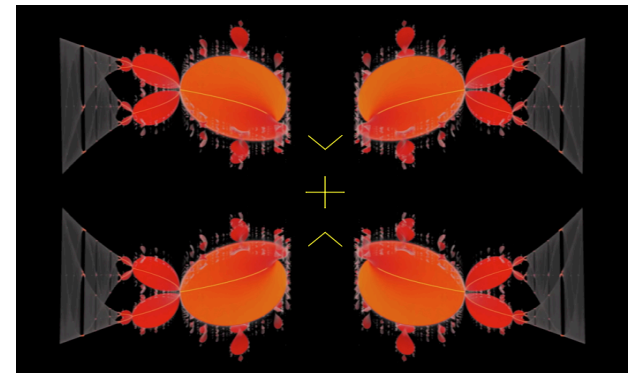

VIEW WITH THE 4 CARDINALS/ 4 NODES

EXTRACTION (from decision to action) + 100 billion

PROCESSING & MANUFACTURING (from decision to action) + C.I.

AVAILABILITY (from who decide what is made to who makes it) + TTL POPULATION

ACCESSIBILIT (from who decide who have and who have not) + $x_{n+1} = r x_n (1-x_n)$

ALLOCATION/
NA

DAY TO DAY USAGE//

Real time data references. Your real time Human impact, on You and Others, influx and outflux index.

For preparation : FUTURE TRADING

FOR THE DEVELOPER/

What language coding is used

How the first PoW/PoS will be issued? Developer's deed!

The development is for a ORBE dedicated Blockchain

A NATIVE Coin will be standardized following the ORBE development – please make Algorithm suggestion!

ORBE Token must be mined in its integrality before distribution; the mining process should be made as easy and costless as possible.

Ei; MAP – Marketing Advertising Publicity

a) **The circulation volume is high enough** — meaning that there should be a consistently high amount of transactions — “ins” and “outs” of ORBE Token in the system. Birth & Death Rate.

b) **There should be more “ins” than “outs”** — more Human are born everyday.

c) **The token hold time is long enough** — the incentives for the ORBE Token holders is Lifespan guaranty base.

OTHER REFERENCES//

Use for Individual acknowledgment//NA//

WALLET/SUB DESIGN to USE

The ORBE wallet uses mobile service provider for fund transfer./

The ORBE wallet has a SMS/OTP service./

The ORBE offers mobile web payments./

UNIVERSAL LEDGER INTEGRATED SERVICE – ULIS: develop from scratch a Protocol to link ALL payment services (the protocol must provide with the most sustainable way and instrument payment for each payment (see Airline booking Algorithm)).
